

# Microscope Slide Cabinet

from Quincy Lab

The Quincy Lab Slide Cabinet was designed for pathological laboratories, doctors' offices, and research institutions that require protected, compact, organized micro-slide storage.

## Sturdy and Stackable

Made of heavy-gauge steel, the Quincy Slide Cabinet features a baked-on, rust-resistant, enamel finish that is specifically finished in a smooth "non-textured" surface for easy cleaning. The cabinets are stackable using interlocking tabs. The slide cabinet is also compatible with other cabinets on the market and can be stacked interchangeably. Each cabinet has six individual drawers and holds up to 5,000 standard 3" x 1" glass slides. A base unit, sold separately, provides solid support for the cabinet and rests on scratch-proof rubber feet. Cabinet and base are available in standard beige (shown at right), or Quincy clean-room ivory.

2 slide cabinets with base unit

## Organized Storage

The drawers have black phenolic pull knobs for convenience. Drawers have a safety stop to eliminate falling out when extended, however, they are easily removed for moving to a work station by simply tipping upward when fully extended. Foam rubber dividers keep slides upright when drawers are partially filled. Identification tabs are included for labeling.

Each slide cabinet is fully inspected before shipment and is packaged using recyclable,
